| 1. Title | 1.1 Title of SPERC | Use as a processing aid and/or an extraction solvent | Υ | Y | | |
| | 1.2 SPERC code | ESVOC SPERC 4.1.v2 | Υ | Y | | |
| | 2.1 Substance/Product Domain | | | | | |
| | Substance types / functions / properties included or excluded | Applicable to petroleum substances and petrochemicals. | Υ | N | | |
| | Additional specification of product types covered: | Includes a variety of aliphatic and aromatic hydrocarbons, ketones, alcohols, acetates, glycols, glycol ethers, and glycol ether acetates. | Υ | N | | |
| | Inclusion of sub-SPERCs | Yes | N | N | | |
| 2 Saama | 2.2 Process domain | | | | | |
| 2. Scope | Description of activities/processes: | Use of a substance as a process chemical or extraction agent. Includes recycling/ recovery, material transfers, storage, maintenance and loading (including marine vessel/barge, road/rail car and bulk container), sampling and associated laboratory activities. | Y | Y | | |
| | 2.3 List of applicable Use Descriptors | | | | | |
| | LCS | IS – Use at industrial sites | Υ | Y | | |
| | su | SU8 - Manufacture of fine chemicals | Υ | Y | | |
| | PC | PC40 – Extraction agents | Υ | Y | | |
| | 3.1 Conditions of use | | | | | |
| | Location of use | Indoor | Υ | Y | | |
| | Water contact during use | Yes | Υ | Y | | |
| | Connected to a standard municipal biological STP | No, site specifc biological STP with assumed discharge rate of municipal biological STP of >= 2000 m³/day | Υ | Y | | |
| 3. Operational | Rigorously contained system with minimisation of release to the environment | No | Υ | N | | |
| conditions | Further operational conditions impacting on releases to the environment | Volatile compounds subject to air emission controls. Wastewater emissions generated from equipment cleaning with water. | Υ | Y | | |
| | 3.2 Waste Handling and Disposal | | | | | |
| | Waste Handling and Disposal: | Residual raw materials and are in some cases recycled and fed back into the process reactor to improve efficiencies. In other cases, residues and by-products are used as raw materials for other downstream applications (EU, 2016). Wastewater generated during cleaning and maintenance operations is directed to a waste water treatment plant for biological degradation. Atmospheric release of waste vapor may be ameliorated using wet scrubbers, thermal oxidizers, solid adsorbents, membrane separators, biofilters, and/or cold oxidizers for trapping residual vapours. | Υ | N | | |

¹ Explanations that are more detailed can be provided for the CSR..

² For the ES for communication a standard phrase may be selected from the ESCom catalogue when available. When no phrase is available yet in the catalogue the proposed phrase can be reported here.

|------------|--|--|------------------|-------------------|--|--|
| | 5.3 Release factors | se factors | | | | |
| | sub-SPERC identifier: | ESVOC 4.1.a.v2 VP >10000 Pa; WS <1 mg/l | Υ | N | | |
| | ERC | ERC 4 | | | | |
| | sub-SPERC applicability: | Vapour pressure >10000 Pa Water solubility <1 mg/l | Υ | N | | |
| | 5.3.1 Release Factor – air | | | | | |
| | Numeric value / percent of input amount (Air) | 5.0% | Υ | Υ | | |
| | Justification of RFs (Air): | This value has been adopted from a published source that documents the worst-case estimates of air emissions based on the expert judgement of environmental scientists from the Dutch National Institute for Public Health and the Environment (RIVM). European Commission (2003). European Commission Technical Guidance Document on Risk Assessment (EUTGD), Report EUR 20418 EN/2, Appendix 1, Table A1.1, Brussels, Belgium. (https://echa.europa.eu/documents/10162/16960216/tgdpart2_2ed_en.pdf) | Υ | N | | |
| | 5.3.2 Release Factor – water | | | | | |
| | Numeric value / percent of input amount (Water): | 0.001% | Υ | Υ | | |
| | Justification of RFs (Water): | The approach used to assign this value is largely qualitative in nature and takes into consideration both the physical properties of the substance and the magnitude of wastewater production at representative production sites. This release factor has been conservatively calculated using water solubility information together with survey results of wastewater effluent volume per tonne of capacity at European oil refineries. CONCAWE (2012). Trends in oil discharged with aqueous effluents from oil refineries in Europe. Report No. 6/12. Brussels, Belgium. (https://www.concawe.eu/wp-content/uploads/2017/01/report-no-6_12.pdf) | Y | N | | |
| | 5.3.3 Release Factor – soil | | | | | |
| | Numeric value / percent of input amount (Soil): | 0.01% (NB Can this value be changed to 5% to be consistent with the ERC 4 designation cited above?) | Υ | Υ | | |
| | Justification of RFs (Soil): | The value has been adopted from an authoritative literature source that documents the release factors for each environmental release category (ERC). The preceding value corresponds to the default release factor for substance manufacturing (ERC 1). ECHA (2016). Guidance on Information Requirements and Chemical Safety Assessment Chapter R.16: Environmental exposure assessment Version 3.0. Appendix A.16-1. Helsinki, Finland. (https://echa.europa.eu/documents/10162/13632/information_requirement s r16 en.pdf) | Y | N | | |
| | 5.3.4 Release Factor – waste | | | | | |
| | Percent of input amount disposed as waste: | 5.0% | Υ | N | | |
| | Justification of RFs: | The value has been adopted from an authoritative literature source that documents the release factors for hazardous wastes generated in an industrial setting. The preceding value corresponds to the default release factor for the use of solvents in a manufacturing process. ECHA (2012). Guidance on Information Requirements and Chemical Safety Assessment Chapter R.18: Exposure scenario building and environmental release estimation for the waste life stage Version 2.1. Appendix R.18-4. Helsinki, Finland. (https://echa.europa.eu/documents/10162/13632/r18 v2 final en.pdf) | Υ | N | | |

| | | CONCAWE (2012). Trends in oil discharged with aqueous effluents from oil refineries in Europe. Report No. 6/12. Brussels, Belgium. (https://www.concawe.eu/wp-content/uploads/2017/01/report-no-6_12.pdf) | | |
| | 5.3.3 Release Factor – soil | | | |
| | Numeric value / percent of input amount (Soil): | 0.01% (NB Can this value be changed to 5% to be consistent with the ERC 4 designation cited above?) | Y | Y |
| | Justification of RFs (Soil): | The value has been adopted from an authoritative literature source that documents the release factors for each environmental release category (ERC). The preceding value corresponds to the default release factor for substance manufacturing (ERC 1). ECHA (2016). Guidance on Information Requirements and Chemical Safety Assessment Chapter R.16: Environmental exposure assessment Version 3.0. Appendix A.16-1. Helsinki, Finland. (https://echa.europa.eu/documents/10162/13632/information_requirement_s_r16_en.pdf)) | Y | N |
| | 5.3.4 Release Factor – waste | | | |
| | Percent of input amount disposed as waste: | 5.0% | Υ | N |
| | Justification of RFs: | The value has been adopted from an authoritative literature source that documents the release factors for hazardous wastes generated in an industrial setting. The preceding value corresponds to the default release factor for the use of solvents in a manufacturing process. ECHA (2012). Guidance on Information Requirements and Chemical Safety Assessment Chapter R.18: Exposure scenario building and environmental release estimation for the waste life stage Version 2.1. Appendix R.18-4. Helsinki, Finland. (https://echa.europa.eu/documents/10162/13632/r18_v2_final_en.pdf) | Y | N |
| | sub-SPERC identifier: | ESVOC 4.1.q.v2; VP 10-100 Pa; WS 1-10 mg/l | Υ | N |
| | ERC | ERC 4 | | |
| | sub-SPERC applicability: | Vapour pressure 10-100 Pa Water Solubility 1-10 mg/l | Y | N |
| | 5.3.1 Release Factor – air | | | |
| | Numeric value / percent of input amount (Air): | 0.1% | Y | Y |
| | Justification of RFs (Air): | This value has been adopted from a published source that documents the worst-case estimates of air emissions based on the expert judgement of environmental scientists from the Dutch National Institute for Public Health and the Environment (RIVM). European Commission (2003). European Commission Technical Guidance Document on Risk Assessment (EUTGD), Report EUR 20418 EN/2, Appendix 1, Table A1.1, Brussels, Belgium. (https://echa.europa.eu/documents/10162/16960216/tgdpart2_2ed_en.pdf) | Υ | N |
| | 5.3.2 Release Factor – water | | | |
| | Numeric value / percent of input amount (Water): | 0.003% | Υ | Y |
| | Justification of RFs (Water): | The approach used to assign this value is largely qualitative in nature and takes into consideration both the physical properties of the substance and the magnitude of wastewater production at representative production sites. This release factor has been conservatively calculated using water solubility information together with survey results of wastewater effluent volume per tonne of capacity at European oil refineries. CONCAWE (2012). Trends in oil discharged with aqueous effluents from oil refineries in Europe. Report No. 6/12. Brussels, Belgium. | Υ | N |

| | Numeric value / percent of input amount (Air): | 0.01% | Υ | Υ |
| | Justification of RFs (Air): | This value has been adopted from a published source that documents the worst-case estimates of air emissions based on the expert judgement of environmental scientists from the Dutch National Institute for Public Health and the Environment (RIVM). European Commission (2003). European Commission Technical Guidance Document on Risk Assessment (EUTGD), Report EUR 20418 EN/2, Appendix 1, Table A1.1, Brussels, Belgium. (https://echa.europa.eu/documents/10162/16960216/tgdpart2_2ed_en.pdf) | Y | N |
| | 5.3.2 Release Factor – water | | | |
| | Numeric value / percent of input amount (Water): | 1.0% | Υ | Υ |
| | Justification of RFs (Water): | The approach used to assign this value is largely qualitative in nature and takes into consideration both the physical properties of the substance and the magnitude of wastewater production at representative production sites. This release factor has been conservatively calculated using water solubility information together with survey results of wastewater effluent volume per tonne of capacity at European oil refineries. CONCAWE (2012). Trends in oil discharged with aqueous effluents from oil refineries in Europe. Report No. 6/12. Brussels, Belgium. (https://www.concawe.eu/wp-content/uploads/2017/01/report-no-6_12.pdf) | Y | N |
| | 5.3.3 Release Factor – soil | | | |
| | Numeric value / percent of input amount (Soil): | 0.01% (NB Can this value be changed to 5% to be consistent with the ERC 4 designation cited above?) | Υ | Y |
| | Justification of RFs (Soil): | The value has been adopted from an authoritative literature source that documents the release factors for each environmental release category (ERC). The preceding value corresponds to the default release factor for substance manufacturing (ERC 1). | Y | N |
