## Solvents in windscreen wiping fluid

### Why is the role of solvents essential?

Together with water, isopropyl alcohol (IPA) is the main component of windscreen wiping fluid. It is used as a windscreen de-icing and cleaning solvent as it remains liquid even in freezing temperatures, effectively removing ice and stains from the windscreen even in most severe weather conditions.

It is crucial for the windshield wash solvent not to cause any harm to the vehicle's paintwork or to attack other materials, such as rubbers, sealants, and trim. Ensuring its compatibility with various materials guarantees the safe and efficient cleaning of the windscreen without causing any damage to the vehicle.
