

FS Section	Content field	Explanation of content	CSR	eSDS
1. Title	1.1 Title of SPERC	Use in rubber production and processing (industrial): solvent-borne	Y	Y
	1.2 SPERC code	ESVOC SPERC 4.19a.v4	Y	Y
2. Scope	<b>2.1 Substance/Product Domain</b>			
	Substance types / functions / properties included or excluded	Applicable to petroleum substances and petrochemicals.	Y	N
	Additional specification of product types covered:	Includes a variety of aliphatic and aromatic hydrocarbons, ketones, alcohols, acetates, glycols, glycol ethers, and glycol ether acetates.	Y	N
	Inclusion of sub-SPERCs	Yes	N	N
	<b>2.2 Process domain</b>			
	Description of activities/processes:	Manufacture of tires and general rubber articles, including processing of raw (uncured) rubber, handling and mixing of rubber additives, vulcanising, cooling and finishing.	Y	Y
	<b>2.3 List of applicable Use Descriptors</b>			
	LCS	IS – Use at industrial sites	Y	Y
	SU	SU11 - Manufacture rubber products	Y	Y
PC	PC0 - Other	Y	Y	
3. Operational conditions	<b>3.1 Conditions of use</b>			
	Location of use	Indoor	Y	Y
	Water contact during use	Yes	Y	Y
	Connected to a standard municipal biological STP	Yes	Y	Y
	Rigorously contained system with minimisation of release to the environment	No	Y	N
	Further operational conditions impacting on releases to the environment	Volatile compounds subject to air emission controls. Wastewater emissions generated from equipment cleaning with water.	Y	Y
	<b>3.2 Waste Handling and Disposal</b>			
	Waste Handling and Disposal:	Residual raw materials and are in some cases recycled and fed back into the process reactor to improve efficiencies. In other cases, residues and by-products are used as raw materials for other downstream applications (EU, 2016). Wastewater generated during cleaning and maintenance operations is directed to a wastewater treatment plant for biological degradation. Atmospheric release of waste vapour may be ameliorated using wet scrubbers, thermal oxidizers, solid adsorbents, membrane separators, biofilters, and/or cold oxidizers for trapping residual vapours. Solvent-containing liquid cleaning wastes are handled as hazardous waste and disposed of via thermal or catalytic incineration capable of efficiently converting volatile organic compounds to carbon dioxide and water. Hazardous waste handling conforms with the requirements of the Waste Framework Directive and includes procedures that minimize release during production, collection, storage, transportation, and treatment. These measures include a ban on the mixing of waste types, suitable packaging and labelling, and detailed documentation on the sources, quantities, and characteristics of the waste. EU (2016). Best Available Techniques (BAT) Reference Document for Common Waste Water and Waste Gas Treatment/Management Systems	Y	N

5.3 Release factors				

FS Section	Content field	Explanation of content	CSR	eSDS
	<b>sub-SPERC identifier:</b>	ESVOC 4.19a.a.v4 VP >100 Pa; WS <0.001 mg/l	Y	N
	ERC	ERC 4		
	<b>sub-SPERC applicability:</b>	Vapour pressure >100 Pa Water solubility <0.001 mg/l	Y	N
<b>5.3.1 Release Factor – air</b>				
	<b>Numeric value / percent of input amount (Air)</b>	10%	Y	Y
	<b>Justification of RFs (Air):</b>	This value has been adopted from a published source that documents the worst-case estimates of air emissions based on the expert judgement of environmental scientists from the Dutch National Institute for Public Health and the Environment (RIVM). European Commission (2003). European Commission Technical Guidance Document on Risk Assessment (EUTGD), Report EUR 20418 EN/2, Appendix 1, Table A3.11 (processing aids), Brussels, Belgium. ( <a href="https://echa.europa.eu/documents/10162/16960216/tqdp2_2ed_en.pdf">https://echa.europa.eu/documents/10162/16960216/tqdp2_2ed_en.pdf</a> )	Y	N
<b>5.3.2 Release Factor – water</b>				
	<b>Numeric value / percent of input amount (Water):</b>	0.0000003%	Y	Y
	<b>Justification of RFs (Water):</b>	The factor was established after identifying the geometric mean for eight water solubility categories and combining this result with the water usage at a tire manufacturing plant. The volume of cooling water in direct contact with the rubber as it emerges from the mixing mill was reported to be 3.3 m <sup>3</sup> /tonne of rubber (Wolf, 2009). This factor was used along with the water solubility limit characterizing each category to calculate the individual water release factors. Wolf, H.A., 2009. Wastewater Reuse in a Wastewater-Free Production Plant. Wolf Engineers and Consultants. Munich, Germany. <a href="http://www.wolf-ingenieure.com/pdf/wolf%20engineers+consultants_2009_Wastewater%20Free%20Production.pdf">http://www.wolf-ingenieure.com/pdf/wolf%20engineers+consultants_2009_Wastewater%20Free%20Production.pdf</a> .	Y	N
<b>5.3.3 Release Factor – soil</b>				
	<b>Numeric value / percent of input amount (Soil):</b>	0.1%	Y	Y
	<b>Justification of RFs (Soil):</b>	The soil release factor was taken from a published source that documents the worst-case estimates of the soil emissions associated with substances used in polymer processing operations. Based on the expert judgement of environmental scientists from the Dutch National Institute for Public Health and the Environment (RIVM), the highest soil release factor was selected for a substance that is not widely dispersed. European Commission (2003). European Commission Technical Guidance Document on Risk Assessment (EUTGD), Report EUR 20418 EN/2, Appendix 1, Table A3.11 (processing aids), Brussels, Belgium. ( <a href="https://echa.europa.eu/documents/10162/16960216/tqdp2_2ed_en.pdf">https://echa.europa.eu/documents/10162/16960216/tqdp2_2ed_en.pdf</a> )	Y	N
<b>5.3.4 Release Factor – waste</b>				
	<b>Percent of input amount disposed as waste:</b>	4.0%	Y	N
	<b>Justification of RFs:</b>	The quoted value was derived from a life cycle assessment for plastic parts manufacturing using injection moulding machines (Oncel et al. 2017). This operation provides a reasonable surrogate for the manufacture of rubber products such as seals and gaskets and automotive tires. An uncertainty factor of 10 has been applied to this value based on the anticipated variability of this factor across different industry sectors. Oncel, M.S. et al. (2017). Hazardous wastes and waste generation factors for plastic products manufacturing industries in Turkey. Sustainable Environ. Res. 27,188-194.	Y	N

	Numeric value / percent of input amount (Soil):	0.1%	Y	Y
	Justification of RFs (Soil):	The soil release factor was taken from a published source that documents the worst-case estimates of the soil emissions associated with substances used in polymer processing operations. Based on the expert judgement of environmental scientists from the Dutch National Institute for Public Health and the Environment (RIVM), the highest soil release factor was selected for a substance that is not widely dispersed. European Commission (2003). European Commission Technical Guidance Document on Risk Assessment (EUTGD), Report EUR 20418 EN/2, Appendix 1, Table A3.11 (processing aids), Brussels, Belgium. <a href="https://echa.europa.eu/documents/10162/16960216/tgdpart2_2ed_en.pdf">https://echa.europa.eu/documents/10162/16960216/tgdpart2_2ed_en.pdf</a>	Y	N
<b>5.3.4 Release Factor – waste</b>				
	Percent of input amount disposed as waste:	4.0%	Y	N
	Justification of RFs:	The quoted value was derived from a life cycle assessment for plastic parts manufacturing using injection moulding machines (Oncel et al. 2017). This operation provides a reasonable surrogate for the manufacture of rubber products such as seals and gaskets and automotive tires. An uncertainty factor of 10 has been applied to this value based on the anticipated variability of this factor across different industry sectors. Oncel, M.S. et al. (2017). Hazardous wastes and waste generation factors for plastic products manufacturing industries in Turkey. Sustainable Environ. Res. 27,188-194.	Y	N

This factor was used along with the water solubility limit characterizing each category to calculate the individual water release factors. Wolf, H.A., 2009. Wastewater Reuse in a Wastewater-Free Production Plant. Wolf Engineers and Consultants. Munich, Germany. <a href="http://www.wolf-ingenieure.com/pdf/wolf%20engineers+consultants_2009_Wastewater%20Free%20Production.pdf">http://www.wolf-ingenieure.com/pdf/wolf%20engineers+consultants_2009_Wastewater%20Free%20Production.pdf</a>	Y	N
<b>5.3.3 Release Factor – soil</b>				
	Numeric value / percent of input amount (Soil):	0.1%	Y	Y

FS Section	Content field	Explanation of content	CSR	eSDS
	<b>Justification of RFs (Soil):</b>	The soil release factor was taken from a published source that documents the worst-case estimates of the soil emissions associated with substances used in polymer processing operations. Based on the expert judgement of environmental scientists from the Dutch National Institute for Public Health and the Environment (RIVM), the highest soil release factor was selected for a substance that is not widely dispersed. European Commission (2003). European Commission Technical Guidance Document on Risk Assessment (EUTGD), Report EUR 20418 EN/2, Appendix 1, Table A3.11 (processing aids), Brussels, Belgium. <a href="https://echa.europa.eu/documents/10162/16960216/tgdpart2_2ed_en.pdf">https://echa.europa.eu/documents/10162/16960216/tgdpart2_2ed_en.pdf</a>	Y	N
<b>5.3.4 Release Factor – waste</b>				
	<b>Percent of input amount disposed as waste:</b>	4.0%	Y	N
	<b>Justification of RFs:</b>	The quoted value was derived from a life cycle assessment for plastic parts manufacturing using injection moulding machines (Oncel et al. 2017). This operation provides a reasonable surrogate for the manufacture of rubber products such as seals and gaskets and automotive tires. An uncertainty factor of 10 has been applied to this value based on the anticipated variability of this factor across different industry sectors. Oncel, M.S. et al. (2017). Hazardous wastes and waste generation factors for plastic products manufacturing industries in Turkey. Sustainable Environ. Res. 27, 188-194.	Y	N
	<b>sub-SPERC identifier:</b>	ESVOC 4.19a.v.v4 VP <1 Pa; WS 10-100 mg/l	Y	N
	<b>ERC</b>	ERC 4		
	<b>sub-SPERC applicability:</b>	Vapour pressure <1 Pa Water solubility 10-100 mg/l	Y	N
<b>5.3.1 Release Factor – air</b>				
	<b>Numeric value / percent of input amount (Air)</b>	1%	Y	Y
	<b>Justification of RFs (Air):</b>	This value has been adopted from a published source that documents the worst-case estimates of air emissions based on the expert judgement of environmental scientists from the Dutch National Institute for Public Health and the Environment (RIVM). European Commission (2003). European Commission Technical Guidance Document on Risk Assessment (EUTGD), Report EUR 20418 EN/2, Appendix 1, Table A3.11 (processing aids), Brussels, Belgium. <a href="https://echa.europa.eu/documents/10162/16960216/tgdpart2_2ed_en.pdf">https://echa.europa.eu/documents/10162/16960216/tgdpart2_2ed_en.pdf</a>	Y	N
<b>5.3.2 Release Factor – water</b>				
	<b>Numeric value / percent of input amount (Water):</b>	0.01%	Y	Y
	<b>Justification of RFs (Water):</b>	The factor was established after identifying the geometric mean for eight water solubility categories and combining this result with the water usage at a tire manufacturing plant. The volume of cooling water in direct contact with the rubber as it emerges from the mixing mill was reported to be 3.3 m <sup>3</sup> /tonne of rubber (Wolf, 2009). This factor was used along with the water solubility limit characterizing each category to calculate the individual water release factors. Wolf, H.A., 2009. Wastewater Reuse in a Wastewater-Free Production Plant. Wolf Engineers and Consultants. Munich, Germany. <a href="http://www.wolf-ingenieure.com/pdf/wolf%20engineers+consultants_2009_Wastewater%20Free%20Production.pdf">http://www.wolf-ingenieure.com/pdf/wolf%20engineers+consultants_2009_Wastewater%20Free%20Production.pdf</a>	Y	N
